DOMAIN: CONTAINS FOUR HOMOLOGOUS REPEATS WITH A CONSENSUS
SEQUENCE COMMON TO ALL ANNEXIN PROTEINS. A PAIR OF THESE REPEATS
SEQUENCE COMMON TO ALL ANNEXIN PROTEINS. A PAIR OF THESE REPEATS
MAY FORM ONE BINDING SITE FOR CALCIUM AND PHOSPHOLIPID.

MISCELLANEOUS: IT MAY CROSS-LINK FLASMA MEMBRANE PHOSPHOLIPIDS
WITH ACTIN AND THE CYTOSKELETON AND BE INVOLVED WITH EXOCYTOSIS.
SIMILARITY: BELONGS TO THE ANNEXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                  RE 100:259',264(1991).

RE 100:259',264(1991).

RETURITY FOR CALCIUM IS GREATLY ENHANCED BY ANIONIC PHOSPHOLIPIDS. APPINITY FOR CALCIUM IS GREATLY ENHANCED BY ANIONIC PHOSPHOLIPIDS. IT BINDS TWO CALCIUM IONS WITH HIGH AFFINITY.

SUBGUST: TETRAMER OF 2 LIGHT CHAINS (P10 PROTEINS) AND 2 HEAVY CHAINS (P36 PROTEINS).

SUBCELLULAR LOCATION: IN THE LAMINA BENEATH THE PLASMA MEMBRANE. SUBCELLULAR LOCATION: IN THE LAMINA BENEATH THE WISSME AMBRICATIVE ADULT BRAIN, HEART, STRIATED MUSCLE, LIVER, KIDNEY, AND VERY HIGH LEVELS IN SKIN.

EVELOPMENTAL STAGE: THROUGHOUT OCCENESIS AND IN MATURE EGGS. CONSTANT LEVELS DURING EARLY EMBRYOGENESIS, BUT DECREASE AT 8H. ATTER MIDBLASTULA TRANSITION, THE STEADY STATE LEVEL INCREASES.

C -!- FUNCTION: AS WELL AS ITS ROLE IN THE UREA CYCLE, MAY BE INVOLVED IN TISSUE REMODELING.

C -!- CATALYTIC ACTIVITY: L-ARGININE + H(2)O = L-ORNITHINE + UREA.

C -!- CATALYTIC ACTIVITY: L-ARGININE DEGRADATION.

C -!- SUBUNIT: HOMOTRIMER (BY SIMILARITY).

C -!- SUBUNIT: HOMOTRIMER (BY SIMILARITY).

C -!- SUBUNIT: HOMOTRIMER (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED AT DIFFERING TADPOLE STAGES IN TAIL,

TRIESTINE, HINDLIMB AND TRUNK REGION. MOST ABUNDANT IN TADPOLE

TAIL.

                                DEVELOPMENTAL STAGE: FIRST DETECTED IN NEURULA (STAGE 16/17).
HIGHEST LEVELS IN WHOLE TANDFOLE FOUND BAROUND STAGE 47/48. IN THE
INTESTINE, INCRASASED LEVELS ARE FOUND DURING METAMORPHOSIS: (STAGES
58-64). LOW LEVELS EXPRESSED IN HINDLIMB UNTIL STAGE 66 AFTER
WHICH, LEVELS DRAMATICALLY INCREASE. IN THE TAIL, A CONSTANT HIGH
LEVEL OF EXPRESSION IS FOUND THROUGHOUT METAMORPHOSIS.
INDUCTION: ACTIVATED BY THYROID HORMONE (T3).
SIMILARITY: BELONGS TO THE ARGINASE FAMILY.

```

METAMORPHOSIS.
INDUCTION: ACTIVATED
SIMILARITY: BELONGS

ACTIVATED BY THYROID HORMONE (T3).

BELONGS TO THE ARGINASE FAMILY.

INTESTINE, INCREASED LEVELS ARE FOUND DURING METAMORPHOSIS (STAGES 58-64) AND IN THE HINDLIMB, EXPRESSED AT LOW LEVELS DURING METAMORPHOSIS UNTIL STAGE 66 WHEN LEVELS DRAMATICALLY INCREASE. IN THE TAIL, A CONSTANT HIGH LEVEL OF EXPRESSION IS FOUND THROUGHOUT

PATHWAY: FIRST STEP IN ARGINIED DEGRADATION.

SUBUNIT: HOMOTRIMER (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED AT DIFFERING TADPOLE STAGES IN TAIL.

TAIL. INTESTINE, HINDLIMB AND TRUNK REGION. STRONGEST IN TADPOLE TAIL.

DEVELOPMENTAL STAGE: FIRST DETECTED IN EARLY TAILBUD (STAGE 23/24). HIGHEST LEVELS IN WHOLE TADPOLE FOUND AROUND STAGE 47/48.

IN THE INTESTINE, INCREASED LEVELS ARE FOUND DURING METAMORPHOSIS IN THE INTESTINE, INCREASED LEVELS ARE FOUND DURING METAMORPHOSIS.

(STAGES 58-64) AND IN THE HINDLIMB, EXPRESSED AT LOW LEVELS DURING METAMORPHOSIS UNTIL STAGE 66 WHEN LEVELS DRAMATICALLY INCREASE. IN THE TAIL, A CONSTANT HIGH LEVEL OF EXPRESSION IS FOUND THROUGHOUT THR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       INDUCTION: ACTIVATED BY THYROID HORMONE (T3).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C:- FUNCTION: THIS PROTEIN IS ONE OF THE CHAINS OF THE NONENZYMATIC
C:- FUNCTION: THIS PROPORENT (FO) OF MITOCHONDRIAL ATPASE.
C:- SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CP(1) - THE CATALYTIC
C:- CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
C:- CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). CF(0)
C:- HAS THREE MAIN SUBUNITS: A, B AND C.
C:- SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANE.
C:- SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANE.
C:- SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANE.
C:- SUBCELLANEOUS: THESE PROTEIN STORED IN THE
C:- STORAGE BODIES OF ANIMALS OR HUMAN AFFECTED WITH CEROID
LIPOFUSCINOSIS (BATTEN'S DISEASE).
C:- MITOCHONDRIAL ATP SYNTHASE PROTECLIPID AND THEY SPECIFY PRECURSORS
WITH DIFFERENT IMPORT SEQUENCES BUT IDENTICAL MATURE PROTEINS.
C:- SIMILARITY: BELONGS TO THE ATPASE C CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AT93_HUMA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P48201;

"Sequence and over-expression of subunits of adenosine triphosphate
synthase in thermophilic bacterium PS3.";

synthase in thermophilic bacterium PS3.";

BIOCHIM. BLOPHYS. Acta 933:141-155(1988).

FUNCTION: A POSSIBLE FUNCTION FOR THIS PROTEIN IS TO GUIDE THE
ASSEMBLY OF THE MEMBRANE SECTOR OF THE ATPASE ENTRY COMPLEX.

-I- SIMILARITY: TO THE CORRESPONDING SUBUNIT IN OTHER BACTERIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SEQUENCE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     151

1. SUBCELLULAR LOCATION: NUCLEAR (POTENTIAL).

1. DEVELOPMENTAL STAGE: FIRST DETECTED IN THE 10 H GASTRULA AROUND THE BLASTOPORE. IN LATER STAGES OF GASTRULATION AND EARLY NEURALIZATION, EXPRESSED IN POSTERIOR MESODERM AND THE NOTOCHORD WHERE EXPRESSION CONTINUES AT LEAST UNTIL SWIMMING LARVAL STAGE.

1. SIMILARITY: CONTAINS A T-BOX DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE; 96125169.
